Global Aircraft Oxygen System Market is valued approximately at USD 4.47 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 6.33% over the forecast period 2021-2027. Aircraft Oxygen System provides oxygen to the passengers and crew during the flight operation if cabin air pressure reduces while above 12,000 ft. operation, or in emergency conditions. The global Aircraft Oxygen System market is being driven by increase in passengers' movement via air which thereby increases air traffic. For instance, according to Statista, there has been increase in the international tourist arrivals from 1.4 billion in 2018 to 1.46 billion arrivals in 2019. The other driving factor for the market growth is the continuous induction of new aircrafts. For instance, in 2020, Airbus SE had delivered 566 aircraft to India and further 566 aircrafts by the end of 2021. Furthermore, high use of research & development activities in the technological advancements, developing aviation industry and increasing private investments by the key players to manufacture new aircrafts & oxygen systems will provide new opportunities for the global Aircraft Oxygen System industry. However, long life span of aircrafts reduces replacement cycle and high fair prices of airlines in passenger tickets impacts air travel and may impede market growth over the forecast period of 2021-2027.

The regional analysis is based on the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World for the global Aircraft Oxygen System

Market. North America is the leading region across the world in terms of market share and is also anticipated to exhibit the highest CAGR over the forecast period 2021-2027 due to the presence of large aircrafts manufacturers, increasing investments by the private companies in aviation sector and adoption of advanced technologies.
