Global Aircraft Propulsion System Market is valued at approximately USD xxx billion in 2022 and is anticipated to grow with a healthy growth rate of more than xxx over the forecast period 2023-2030. A propulsion system is a machine utilized for aircraft movement and flight assistance. It comprises an engine, a propeller, and additional components. The engine generates propeller motion, producing thrust to propel the aircraft forward. The growth of the global aircraft propulsion system market is primarily fueled by the rising utilization of aircraft and helicopters. Additionally, the market expansion is driven by the advancement of unmanned aerial vehicles designed for combat missions.

Moreover, the growing airline industry plays a significant role in supporting the growth of the Aircraft Propulsion System Market. As the airline industry expands, there is a higher demand for aircraft to accommodate more passengers and reach new destinations. This increased demand directly translates into a greater need for aircraft propulsion systems. According to Statista, in 2020 the global airline industry was valued USD 391.22 billion, and the industry increased significantly and reached USD 785.64 billion in 2022. Additionally, advancements in electro-thermal propulsion systems and radio frequency (RF) ion thrusters are anticipated to create a lucrative opportunity for the market. However, the rise in crude oil prices stifled market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Aircraft Propulsion System Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 due to the presence of key market players, growing commercial aviation sector, and growing number of space crafts, missiles and UAVs in the region. Asia Pacific is expected to grow at fastest growth rate during the forecast period, owing to growing air travel, rising defense expenditure, fleet modernization and supportive government initiatives.

Recent Developments in the Market:

In April 2023, Aerospace startup Tehiru partnered with Pangea Aerospace to utilize Pangea's ARCOS methalox aerospike engine for Tehiru's innovative thermo-electric rocket booster. This collaboration focuses on improving rocket technology's cost-efficiency, sustainability, and reusability. Tehiru's rocket, incorporating the ARCOS engine, enables the transportation of payloads weighing up to 550 kg to low Earth orbit (LEO) as an essential part of their air-launch system.

In November 2021, Wright Electric, Inc., a prominent company in net-zero propulsion and aircraft design, unveiled a new addition to their lineup of zero-emissions aircraft designed for commercial use. The announcement coincides with the COP 26 UN Climate Change Conference in Glasgow, Scotland. Known as the Wright Spirit, this aircraft expected to feature Wright's powerful electric propulsion system and cater to the one-hour, 100-passenger flight market.
