## **Abstracts**

Global Airport Security Market is valued approximately at USD 13.5 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8.3% over the forecast period 2021-2027. The need to simplify the security screening process to decrease passenger waiting times, as well as the quick pace at which new airports are being built, are both major drivers of market growth. The overall number of passengers carried on scheduled flights increased by 3.6 percent to 4.5 billion in 2019, according to figures from the United Nations-backed International Civil Aviation Organization (ICAO). Despite this, global volatility and a lack of finances for urban expansion and public infrastructure expansion, as well as upgrades to existing airports, continue to be a major restraining factor. Furthermore, the absence of a significant return on investment and the dependability of present defensive gear in the face of threats have deterred operators from purchasing contemporary technology. Over the next several years, current retrofits and modifications to digital protection systems are expected to have a positive impact on the sector.

During the projection period, APAC is projected to have the biggest market share and would dominate the industry. The APAC market has significant growth prospects for the market. To combat terrorist threats, the APAC and MEA regions are substantially investing in airport security technologies. In addition, the area is rapidly outsourcing network infrastructure security since it may not be able to manage sophisticated and numerous attacks on its own.
