Abstracts

Global Aluminum-free Natural Food Color Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. The Aluminum-free Natural Food Color also known as food colors or coloring additives can be defined as pigments, dyes, and substances that are utilized to provide color to the food and beverages. Aluminum-free food colors are available in the form of liquids, gels, and powder food coloring. These colors are widely used in different products such as bakery, and confectionery products, beverages etc. The growing consumption of convenience food products and increasing demand for clean labelled products as well as strategic initiatives from leading market players are factors that are accelerating the global market demand. For instance, according to Statista – as of 2022, the revenue in global Convenience Food segment is estimated at USD 558.30 billion in 2022. The market is projected to grow by CAGR of 5.94% between 2022 & 2027 to reach to USD 745.02 billion by end of 2027.

Furthermore, leading market players are venturing into partnerships to leverage the rising adoption of Aluminum-free Natural Food Color. For instance, in August 2021, Tokyo, Japan based DIC Corporation entered in a partnership with San Diego, California, USA based Debut Biotech. Under this partnership DIC would utilize Debut's cell-free biomanufacturing platform to create natural pigments for food colorants and cosmetics. Also, growing awareness towards health hazards associated with synthetic food colour coupled with surging preference towards natural ingredients

are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, a high extraction cost associated with natural pigments and less shelf life as compared to synthetic colors impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Aluminum-free Natural Food Color Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing demand for clean labeled products and presence of leading market players. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028. Factors such as the thriving growth of food and beverages products and increasing inclination towards natural ingredients, would create lucrative growth prospects for the global Aluminum-free Natural Food Color Market across the Asia Pacific region.
