Abstracts

The global Ampoule Sticker Labelling Machine Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2029. The ampoule sticker labelling machine is used to label filled and sealed glass ampoules that are used to contain and preserve a sample, typically a solid or liquid. The packaging for ampoules is used in the pharmaceutical, personal care, and cosmetic industries. Ampoules packaging is typically used to protect liquids and solutions from air and contaminants. The Ampoule Sticker Labelling Machine market is expanding because of factors such as the rising prevalence of chronic disorders, industry standard for pharmaceutical packaging and growing adoption of automatic ampoule sticker labelling machines.

According to the American College of Cardiology in 2019, the number of cardiovascular diseases is incessantly growing. Approximately one-third of the total deaths are caused by cardiovascular disease. In 2019, there were around 523 million new cases. Whereas rising demand from end-user industries and technological advancement and innovations create lucrative opportunities for the market. However, the high cost of ampoule sticker labelling machines hampers the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Ampoule Sticker Labelling Machine Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Asia Pacific dominated the market in terms of revenue, owing to the increasing adoption of advanced technologies for cosmetic packaging, and growing adoption of

skincare products. Whereas the Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as increasing prevalence of chronic disorders and growing demand from end-user industries in the forecast period.

Recent Developments in the Market:

In June 2019, Acucote, a manufacturer of pressure-sensitive adhesive coatings, expanded its portfolio with nineteen new pressure-sensitive paper and film constructions designed specifically for the pharmaceutical market. According to the company, photoluminescence can be added to the adhesive for UV light detection systems to improve security. These materials are intended for use in test tubes, syringes, pharmaceutical labelling, auto-injectors, vials, and ampoules. With increasing pharmaceutical product sales, the use of these ampoule products will effectively aid in market growth.

In August 2019, Herma introduced Herma 211, which is suitable for labelling a variety of cylindrical products such as syringes, tubes, glass vials, and ampoules. It can apply approximately 30 labels per minute and handle webs as wide as 80mm and products with diameters ranging from 10-120mm. The machine's robust design allows it to operate continuously, even under stringent labelling requirements.
