Global Anesthesia Breathing Bag Market is valued at approximately USD XXX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. The anaesthesia breathing bag is a hand-held medical equipment that offers mechanical ventilation for patients with breathing issues. For ease of breathing, anaesthesia breathing bags are normally linked to the oxygen source. Also, they are used to control breathing, maintain constant positive airway pressures, monitor tidal volume, and sense compliance during ventilation. The key factor driving the market growth is increased incidences of respiratory disease like asthma have grown significantly due changes to a modern and urban lifestyle. WHO reports that 300 million people worldwide, of all ages, suffer with the breathing disease asthma. A hand-held medical device known as an anaesthesia breathing bag is used to provide medical ventilation to patients who have breathing problems. Also, the growing investments in healthcare sector by governments and private organizations are predicted to boost the market growth during forecast period.

For instance, in 2021, the Indian union government invested USD 40.56 million (Rs324 crore), to establish more than 42 diagnostic laboratories and virology research, as a part of a central scheme from 2021–22 to 2025–26. As a result, rising government investment in healthcare sector will create lucrative demand for the market during forecast period. Also, rising geriatric population who is susceptible to respiratory disorders & surgeries would create lucrative opportunities for the market during forecast period. However, the lack of skilled personnel, and risks of cross-contamination stifle

market growth throughout the forecast period of 2022-2029.
