Abstracts

Global Angiography Devices Market is valued at approximately USD 11409.32 million in 2021 and is anticipated to grow with a healthy growth rate of more than 6.2% over the forecast period 2022-2029. The medical devices and instruments used for imaging and diagnostics are called angiography devices. A medical procedure known as angiograms makes it possible to image the lumen of blood vessels such as arteries and veins as well as the chambers of the heart and other body organs. These are also known as low-risk vascular imaging devices. The key factors driving the market growth are rising

aging population and incidence of cardiovascular diseases. Also, another factor driving the market growth is rising government investments in healthcare infrastructure that creates lucrative demand for the market.

According to the World Health Organization, over 17.9 million deaths worldwide occur in 2017, as a result of cardiovascular diseases, and by 2030, this number is expected to rise to over 23.6 million. As a result, the prevalence of cardiovascular diseases is boosting the market for angiography devices, which could gradually result in the market's growth. Also, rising demand for interventional angiography systems in minimally invasive surgeries would create lucrative opportunities for the market during forecast period. However, the poor reimbursement policies and high cost of angiography stifle market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Angiography Devices Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the rising geriatric population and prevalence of cardiovascular diseases and presence of key companies in the U.S. attributed to the major share of the market. Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising favorable government reimbursement policies, technological advancements, and rising investment in healthcare sector.

Major market players included in this report are:

Toshiba Medical Systems Corporation

St. Jude Medical, Inc.

Siemens AG

Shimadzu Corporation

Medtronic Plc

Koninklijke Philips N.V.

General Electric Company

Johnson & Johnson

Boston Scientific Corporation

Abbott Laboratories

Recent Developments in the Market:

In April 2022, GE Healthcare launched its new product, the "Discovery IGSTM 740 mobile angiography system." The untethered Discovery IGS 740 offers seating flexibility and room design. Users may experience superior comfort and control due to the rail-free design and flexible wide bore C-arm positioning of the Discovery. Additionally, both in 2D and 3D, its large detector covers large anatomies.

In 2021, Royal Philips introduced its perception for interventional drugs by integrating its breakthrough spectral CT imaging technology into a hybrid Angio CT suite. Through the combination of its unique Spectral CT 7500 system and its Image-Guided Therapy System – Azurion with FlexArm into a single interventional suite solution, Philips aims to provide interventionalists with rapid table-side access to these two significant imaging modalities.
