Abstracts

Global Animal Health Market is valued approximately USD 36.37 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 9.72 % over the forecast period 2022-2028. Animals require proper attention from their owners on a daily basis in order to maintain excellent health. Because the production of healthy livestock guarantees a stable food supply and maintains consumer price stability, frequent animal health monitoring and the prevention of animal disease outbreaks have become essential for every country. The animal health industry is steadily gaining pace around the world, since effective management and prevention are required to minimise the spread of zoonotic illnesses among animals and humans. A huge growth in global demand for protein food, as well as an increase in the frequency of zoonotic and food-borne diseases, are driving the industry. Companies have been spurred to develop enhanced vaccines and medications as a result of the enormous growth in disease prevalence. As a result of the increasing demand, there has been an increase in the number of companies making regular efforts to control pathogen contamination concerns and food-borne diseases, which is helping to drive market expansion. Furthermore, the total market is expected to be driven by the growing number of

government programmes to promote animal health products. During the pandemic, the use of telemedicine has increased significantly. When it comes to purchasing veterinarian items and pet food, pet owners prefer online channels such as eCommerce. According to the United Nations Department of Economic and Social Affairs, the global population is currently around 7.3 billion people and is expected to reach around 9.7 billion by 2050; of these, according to the International Fund for Agricultural Development's estimates (IFAD), 795 million people are undernourished. The numbers above demonstrate the urgent need to increase food supply by adopting livestock on a wide basis.. The Innovative Medicines Initiative (IMI), for example, is a public-private collaboration that supports collaborative research to improve veterinary pharmaceutical innovation in Europe. However, high cost associated with animal healthcare drugs impedes the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Animal Health Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. Because of the vast range of definite measures adopted by government animal welfare groups that are continually working for general improvement in animal health, North America accounted for the greatest market share. Furthermore, technological developments, an increase in the number of pet owners, and an increase in the frequency of zoonotic diseases are likely to drive market expansion in this country. Several large companies' coordinated efforts to improve their R&D skills and assure high-quality standards are expected to drive demand even higher in this region. Furthermore, the majority of the share can be linked to the region's high disease burden. From 2022 to 2028, the Asia Pacific regional market is expected to grow at the fastest rate. This region's rapid expansion is thought to be the result of constant R&D spending by major companies in the animal health industry, as well as their efforts to sell branded and generic treatments at a low cost. The exponential expansion is due to increased understanding of pet nutrition and supplies, as well as increased disposable cash.
