Abstracts

Global Animal Livestock Drugs Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Animal Livestock Drugs are a variety of drugs that are specially designed to cure diseases related to animal livestock such as cattle, sheep, goats, horses, and many others. These drugs are created for the diagnosis and prevention of diseases that occur in animal livestock to maintain good health. The rising incidences of zoonotic and food-borne diseases, growing investment in healthcare infrastructure development, rising government awareness for animal health, and increasing launch of animal livestock drugs by the leading market players are the several key factors stimulating the growth of the global market. For instance, in May 2022, The UK's National Office of Animal Health (NOAH) proclaimed the introduction of the Livestock Vaccination Guideline. The objective of this guideline is to provide support to farmers and vets for improving the health and welfare of UK cattle and sheep. Also, maintain farm resilience and sustainable developments in productivity. Consequentially, rising government support and execution of several animal healthcare guidelines are surging the demand for animal livestock drugs, which is accelerating the market growth across the globe. However, the side effects of several drugs impede the growth of the market over the forecast period of 2022-2028. Also, the rising drug approvals and launches, along with growing research and development activities are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Animal Livestock Drugs Market study include

Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the increasing R&D activities by the leading market players and rising emphasis on animal livestock health. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing government awareness programs, as well as the growing prevalence of zoonotic and food-borne diseases, would create lucrative growth prospects for the Animal Livestock Drugs Market across the Asia-Pacific region.
