Global Anthrax Vaccine Market is valued approximately at USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7.85% over the forecast period 2021-2027. Anthrax is a deadly disease caused by the spore-forming bacteria *Bacillus anthracis*. The illness mostly affects cattle and wild game. Humans, on the other hand, can become infected with anthrax bacterium through direct or indirect contact with animals that have anthrax. The bacterium that causes anthrax enters the human body through a skin wound. Furthermore, inhaling bacterial spores and eating infected meat might result in infection. Anthrax symptoms include skin lesions, fever, and vomiting. A three-dose regimen of anthrax vaccinations is used to prevent anthrax. Cell-free protective agent (PA) vaccinations and live anthrax vaccines are two common kinds of anthrax vaccines. The market is driven by the key factors such as increased consumption of undercooked/raw meat and growing burden of anthrax globally. According to the Agricultural Economic Insights (AEI) research, meat consumption in the United States increased from 1970 to 2020. Although the eating patterns of chicken, beef, and pork differ drastically, it raises the risk of anthrax. Furthermore, rise in technological development globally boost the market demand in the forecast years. For instance, In August 2020, Dr. Jamie Benn Felix and the Cook Wildlife Lab team with Texas A&M University College of Veterinary Medicine & Biomedical Sciences conducted a pilot trial for the first oral anthrax vaccination for cattle. However, high cost associated with vaccine may impede market growth over the forecast period of

2021-2027.

The North American market is dominating the market of anthrax vaccine. In terms of revenue, the United States dominates the North American market. The European market is quickly developing because of an increasing patient population, particularly in the United Kingdom and Germany. Asia Pacific and Latin American markets are expected to grow considerably in the foreseeable future. Developing economies such as China and India are expected to contribute to the growth of the Asia Pacific market owing to improved health care infrastructure, economic growth, an increase in the number of insurance payers, the expansion of the private health care sector, and increased awareness in these countries.
