Abstracts

Global Anti-acne Dermal Patch Market is valued approximately USD 481.53 million in 2021 and is anticipated to grow with a healthy growth rate of more than 6.10% over the forecast period 2022-2028. The anti-acne dermal patch is a medicated pimple patch that contains active chemicals which help to kill acne-causing bacteria while also reduces inflammation. These patches promote active ingredient absorption into the skin, lowering pain, bumps, and redness, and are beneficial in treating inflammatory acne, such as papules. Tea tree oil and salicylic acid are major active components in these patches. They may also aid in the reduction of the size of cystic or nodular acne lesions. The market for anti-acne dermal patches is expected to grow due to the increased prevalence of skin problems such as severe acne and pimples around the world. One of the primary factors driving the market's growth is the rising need for fast acne treatment and medication. Furthermore, increased demand for anti-acne dermal patches among the general public, particularly among teenagers, as a result of mass marketing on social media platforms, has encouraged its popularity in recent years. Due to an increase in demand for online platforms that provide acne remedies such as patches, the market saw a revenue comeback in 2021. For example, according to Peace Out Firm, a beauty and personal care company that grew its revenue by 131.0 percent in 2021 from online sales of its products, including acne patches, thanks to the popularity of its acne dot. As a result, the rising demand for online portals has greatly reduced the anti-acne dermal patch industry's negative impact from the COVID-19 pandemic,

indicating a positive growth trajectory from 2021. Furthermore, an increasing number of industry participants are working on inorganic strategic collaborations to broaden their target clientele, therefore limiting the COVID-19 pandemic's detrimental impact. However, disruption in the supply chain as a result of COVID-19 stifles market growth throughout the forecast period of 2022-2028.

The key regions considered for the global Anti-acne Dermal Patch Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia Pacific dominated the anti-acne dermal patches market. During the projection period, the segment is expected to grow at a significant rate. This is due to the increased frequency of skin disorders in the general population, the presence of important market competitors, and the widespread use of innovative dermal acne patches. Furthermore, Asian countries such as South Korea, which was one of the first to commercialize acne patches even before they were available in the United States. As a result of these reasons, the market in the region has grown.
