Global Anti-biofilm Wound Dressing Market is valued approximately at USD 606.57 Million in 2020 and is anticipated to grow with a healthy growth rate of more than 9.00% over the forecast period 2021-2027. Anti-biofilm is obtained from plants, natural polymer derived from seaweed agar, for the treatment of infected diabetic wounds and patients suffering from chronic wounds.. The inhibition of the formation of biofilm includes mechanism for the suppression of microbial adhesion & by inhibition of polymer matrix & ECM generation with the interference at the bacterial co-aggregation & QS network. The global Anti-biofilm Wound Dressing market is being driven by increase in incidence of chronic diseases and rise in number of ambulatory surgery centers. Furthermore, the rise in number of accidents, will provide new opportunities for the global Anti-biofilm Wound Dressing industry. For instance, as per the report of National Diabetes Statistic Report, in year 2017 about 100 million people in the U.S. are suffering from diabetes or prediabetes. Also, according to the report of International Diabetes Federation, the incidences of diabetes disease is projected to rise from 366.0 million diabetes patient in 2013 to 552.0 million people by 2030 worldwide. As a result, increase in incidences of chronic diseases will serve as a catalyst for the Anti-biofilm Wound Dressing industry in the future. However, rising cost of treatment and increase in use of advance wound care products, may impede market growth over the forecast period of 2021-2027.

Asia Pacific, North America, Europe, Latin America, and Rest of the World are the key region considered for the regional analysis of global anti-biofilm wound dressing market. The increasing incidence of sports injuries, rising number of road accidents, and the
