Abstracts

Global Antibiotics Market is valued approximately USD 40.85 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.6 % over the forecast period 2021-2027. Antibiotics are the anti-microbial that destroy or slows down the growth of bacteria. Antibiotics are available in different forms like pills, capsules, syrups or injections. The increasing investments in research and development of new antibiotic drugs, increasing growth in the incidences of infection and chronic diseases and constant support from the governments for the development of antibacterial drugs have been driving the global market across the forecast period. There have been continuous efforts of pharmaceutical companies in development of new antibiotics which are more susceptible in nature. According to a report published by Proceedings of the National Academy of Science (PNAS), the consumption rate of antibiotics increased by 39% during the period of 2000-2015, which is further expected to increase by 200% by 2030. As per the report of World Health Organization (WHO), around 10 million cases of tuberculosis were diagnosed in 2019, leading to increased consumption of antibiotics. However, strict government regulations for the approval of new medicines and certain side effects of antibiotics can hamper the growth of the market over the forecast period of 2021-2027. Whereas, prolonged increase in the demand of antibiotics is likely to

increase the market growth during the forecast period.

The regional analysis of global Natural Extracts market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia-Pacific holds the largest market share. This is mainly because of an increase in the number of prescriptions of antibiotics as well as the larger population in the region. Whereas, North America is also expected to project remarkable growth over the upcoming period 2021-2027. Factors such as the availability of many pharmaceutical manufacturers and improving healthcare infrastructure would help North America to outpace the Antibiotics Market.
