Abstracts

Global Antibody Discovery Market is valued approximately USD 6.9 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 9.7% over the forecast period 2023-2030. Antibody discovery is the process of identifying and developing antibodies that can specifically recognize and bind to target molecules, such as proteins or pathogens, in the human body. Antibodies are Y-shaped proteins produced by the immune system in response to the presence of foreign substances, known as antigens. The goal of antibody discovery is to generate antibodies that can be used for various purposes, including diagnostics, therapeutics, and research tools. These antibodies can be designed to selectively bind to a specific target, such as a cancer cell marker, a viral protein, or a receptor on a cell surface. The Antibody Discovery market is expanding because of factors such as increase in investment in R&D activities of antibody discovery and surge in prevalence of infectious & chronic diseases.

According to the World Health Organisation (WHO), low- and middle-income nations would account for 77% of fatalities from chronic diseases in 2021. As a result, the rise in the prevalence of chronic diseases has raised the necessity for producing high-quality antibodies. In addition to these, The Journal of Biomedical and Environmental Science

estimates that in China, 330 million individuals would have cardiovascular disease in year 2021. Additionally, the American Cancer Society reports that in 2020, there were around 1.8 million new cancer cases diagnosed and 606,520 cancer deaths reported in the United States. In addition, the market is expanding as a result of increased R&D investments in antibody discovery and the rise in demand for better, more affordable, and more effective treatments for a number of diseases. Antibodies offer a promising approach to treating diseases since they may be altered to target specific infections and can be administered with little adverse effects. To promote the development of rapid antibody discovery, Abzena, a leading provider of biologics and antibody drug conjugates, announced in September 2022 that it will increase its research and development capacity in Cambridge. Moreover, increased awareness of personalized medicine among consumers and rise in funding for research and development centers is creating a lucrative opportunity to the market. However, high cost of antibody discovery hampers the market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Antibody Discovery Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to prevalence of diseases in the region, dominance of key market players and rising number of research and development activities in the region. Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as rising disease prevalence and target populations, an increase in the number of collaborations for discovery activities, geographic expansion of key players, and active participation of government and nonprofit organizations in the market space.
