## Abstracts

Global Anticoccidial Drugs Market is valued approximately at USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4% over the forecast period 2021-2027. Coccidiosis is a parasite disease caused by Coccidian protozoa, a single-celled parasite. It can only be seen under a microscope. Coccidiosis can infect cattle species as well as wild animals, and it is more common when animals and birds are gathered in large groups. The mucosal and submucosal tissues in the animals' and birds' digestive tracts are damaged by this disease. In addition, this disease causes a reduction in egg production in chickens and is also responsible for flock mortality. The market is driven by advancements in veterinary healthcare and increased incidence of coccidiosis. For instance, Creative Diagnostics announced the launch of a series of novel anticoccidial medication analysis products and services for its global clients in April 2019. Furthermore, a straight programme is formed by the addition of the same ionophore anticoccidial to the starter and growth feeds. Ionophores accounted for 82 percent of all non-medically important antimicrobials sold and distributed in the United States in 2017, total 4,394,850 kg. However, Growing uses of alternative treatments, such as vaccines and herbal medicines may impede market growth over the forecast period of 2021-2027.

North America is the largest global market for anticoccidial drugs. The market for anticoccidial medicines in North America is currently experiencing substantial expansion. This is due to the availability of a variety of anticoccidial drugs, including chemicals and polyether ionophores, as well as the use of anticoccidials in animal feed as a preventive measure. Furthermore, factors such as growing knowledge about coccidiosis prevention, safe animal food supply, and high expenditure in R&D, primarily for creating innovative products, are expected to drive the growth of the North American

anticoagulant drugs market during the projected period.
