Abstracts

Global Antimony Market is valued at approximately USD 1.95 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 6.0% over the forecast period 2022-2028. Antimony is a shiny grey chemical element that is usually found in both metallic and non-metallic types. The metallic form is firm, brittle, and alluring silvery-bluish in color, whereas the non-metallic type is found in a grey powder form. Antimony is a stable element in dry air and is inert to acids and alkalis. It is widely used with lead to boost the strength level of lead in applications like ammunitions as well as it is also gaining huge traction in lead-acid batteries. The execution of the stringent fire regulations, growing adoption of the plastic addictive application, as well as rising demand for electric vehicle and flame retardants across various end-user industries are surging the market demand around the world. For instance, in April 2017, LANXESS- a specialty chemicals company acquired Chemtura- a US-based company with the aim of boosting the production of flame retardant materials and meeting the growing demand by their consumers. Therefore, an increasing number of strategic moves such as mergers & acquisitions, product development, etc. by the leading companies are further stimulating the market demand. However, high prices of Antimony and environmental and health concerns impede the growth of the market over the forecast period of 2022-2028. Also, exploration of newly discovered Antimony reserves is anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the Global Antimony Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Asia-Pacific is the leading region across the world in terms of market share owing to the availability of cheap labor, as well as the existence of large reserves. Whereas, Asia-Pacific is also anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing GDP rate, growth of the electronic industry, coupled with the rising presence of leading companies would create lucrative growth prospects for the Antimony Market across the Asia-Pacific region.
