Abstracts

Global Antiviral Drugs Market is valued at approximately USD 37.26 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 3.2% over the forecast period 2020-2027. Antiviral drugs belong to the class of medication, which used for curing viral infections, such as HIV, hepatitis, influenza, and herpes. Usually, these drugs are overseen in the form of vaccines. In addition, most of these drugs are utilized for viral infections, even though a few broad-spectrum antiviral drugs are efficient alongside a comprehensive range of viruses. These drugs can reduce the ability of flu viruses to produce. When used as directed, antiviral drugs may often help to lessen the duration of flu symptoms in else healthy children and adults and may lower the severity of frequent flu symptoms. Therefore, these factors may promote the adoption of antiviral drugs for the treatment of viral infections all over the world. Therefore, the rise in prevalence of viral infections, such as HIV and influenza, along with the rise in R&D activities and development of advanced and newer formulations are the few factors responsible for the high CAGR of the market during the forecast period. As per the Avert organization, around 37.9 million people were affected by HIV (including 1.7 million children) in 2018, with a global prevalence of HIV of about 0.8% in the adult population. Similarly, according to the U.S. Department of Health & Human Services, in 2017, roughly 21.7 million individuals living with HIV, representing a surge of 8 million since 2010. Thus, the rise in prevalence of HIV diseases throughout the world will foster the demand for antiviral drugs in the forthcoming period. However, the high cost of drug

development, coupled with availability of alternative treatment options, such as homeopathy and naturopathy, are the few major factors inhibiting the market growth over the forecast period of 2020-2027.

The regional analysis of the global Antiviral Drugs market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the rise in availability of sophisticated healthcare infrastructure, and the presence of a significant number of market vendors in the region. Whereas Asia-Pacific is anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027. Factors such as the rise in prevalence of infectious diseases, along with the improving healthcare infrastructure in developing countries, such as China and India, would create lucrative growth prospects for the Antiviral Drugs market across the Asia-Pacific region.
