Abstracts

Global Application Lifecycle Management Market is valued at approximately USD 3.54 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 7.20% over the forecast period 2023-2030. Application Lifecycle Management (ALM) is the process of managing the life of an application from concept to retirement. It involves people, tools, and processes that integrate various disciplines, such as project management, requirements management and governance. ALM also aims to ensure applications run efficiently and securely and meet the needs of end users and stakeholders. The Application Lifecycle Management Market is expanding because of factors such as the rising adoption of mobile devices and increasing usage of cloud-based technologies. Moreover, the expanding number of mobile devices and applications creates more complexity, which increases the service demand in the global market. Its importance has progressively increased during the forecast period of 2023-2030.

According to the Statista in 2021, the global count of mobile devices in operation reached nearly 15 billion and it is projected that the number of mobile devices is estimated to reach 18.22 billion by 2025, indicating a growth of 4.2 billion devices

compared to 2020. In addition, North America recorded the highest smartphone adoption rate, accounting for 84 percent of total mobile connections in 2022. It is projected that the region's smartphone adoption rate will further increase to 90 percent by 2030. The emergence of cloud based ALM solutions is enabling organizations to reduce infrastructure costs and increase flexibility. According to Statista in 2021, the global cloud applications market had a value of 133.6 billion U.S. dollars and is expected to reach 168.6 billion U.S. dollars by 2025. In addition, digital transformation, and rising demand for filter products in the global market would create lucrative growth opportunities. However, high implementation costs and a lack of knowledge about ALM solutions stifle market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Application Lifecycle Management Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America is dominating region during the forecast period owing to the, increasing adoption of innovative technologies, along with the growing consumption of premium alcoholic beverages and the trend of industrial digitalization, are rising factors in the region.
