Abstracts

Global Artificial Intelligence (AI) in Drug Discovery Market is valued approximately at USD 260 million in 2019 and is anticipated to grow with a healthy growth rate of more than 40.7% over the forecast period 2019-2026. Artificial intelligence for drug discovery is a technology that uses distinct algorithms which add value in decision-making processes for drug discovery. The implementation of AI reduces the gap of researches and development in the drug manufacturing process and also help in the targeted of manufacturing of the drugs. For this reason, the biopharmaceutical industries are increasingly adopting AI technology to optimize the drug manufacturing process. Further, rising investment & funding in drug discovery, along with the surging need to control drug discovery & development costs and reduce time are the few factors responsible for high CAGR of the market over the forecast period. For instance, as per India Brand Equity Foundation, 2018, the Indian Government is planning a \$640 million fund for boosting the drug discovery and pharmaceutical infrastructure. The initiative 'Pharma Vision 2020' of Indian Government has a goal for making India a major hub

for drug discovery. This, in turn, is expected to accelerate the demand of artificial intelligence (AI) in drug discovery across the world. However, lack of awareness and high cost & technical limitation of AI decision-making are some major forces expected to impede the growth of global Artificial Intelligence (AI) in Drug Discovery market over the forecast period of 2020-2026.

The regional analysis of global Artificial Intelligence (AI) in Drug Discovery Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the rising focus on R&D & substantial investment, along with the high awareness of the AI in drug discovery among key players located in the region. However, Asia-Pacific is anticipated to exhibit highest growth rate / CAGR over the forecast period, due to constant technological advancements in the pharmaceutical sector and increasing number of pharmaceutical manufacturers in developing countries such as China and India.
