Global Artificial Intelligence (Chipsets) Market is valued approximately at USD 5.4 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 40.1% over the forecast period 2020-2027. Artificial intelligence (AI) chips are specialized silicon chips, which incorporate AI technology to eliminate the complex calculations or problems to human life in many industry verticals. Artificial intelligence (AI) chips are used for machine learning and efficiently solving crucial mathematical and computational problems with huge volume of data. Artificial intelligence (AI) chips increase the operational performance of the device with virtual reality (VR), advanced augment reality (AR), and analytical functions and enhance the user experience and consumes low power. These also offer high computing capabilities to smart devices, such as laptops, smartphones, and smart wearables which in result drives the market growth. The increasingly large and complex data set driving the need for AI will drive the growth of the market. The adoption of AI for improving consumer services and reducing operational cost, growing number of AI applications, improving computing power and

growing adoption of deep learning and neural networks are the few factors responsible for growth of the market over the forecast period. Furthermore, the introduction of products and services along with other strategic alliance by market key players will create a lucrative demand for this market. For instance: on 14th May 2020, NVIDIA launched two products for its EGX Edge AI platform including EGX A100 and EGX Jetson Xavier NX. The tiny EGX Jetson Xavier NX is used for micro-edge servers and EGX A100 for larger commercial off-the-shelf servers in order to deliver high performance. These two solutions offers real-time processing and protection of the massive amounts of data streaming from trillions of edge sensors in hospitals, stores, farms and factories. However, lack of skilled AI workforce is the major factor restraining the growth of global Artificial Intelligence (Chipsets) market during the forecast period.

The regional analysis of global Artificial Intelligence (Chipsets) market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world owing to the growing concern about the security of critical infrastructure and sensitive data has increased government intervention in recent years and resulted in the adoption of AI (chipsets) in this region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
