Abstracts

Global Assisted Reproductive Technology Market is valued approximately at USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7.5% over the forecast period 2021-2027. Assisted Reproductive Technology (ART) is used to treat infertility. In vitro fertilization (IVF) is the effective and most common form of ART. Whereas, multiple pregnancy related issues is the most common problem associated with ART. The market is driven by the key factors such as Rise in Number of Single Women and Same-sex Couples and increasing number of Infertility Cases. According to the World Health Organization (WHO), 186 million people and 48 million couples were diagnosed with infertility by 2020. According to the Centers for Disease Control and Prevention (CDC), around 6 percent to 12 percent of PCOS-affected women in the United States also have infertility issues. As a result, the infertility rate rises with the rise in prevalence of PCOS, fueling the demand for assisted reproductive technologies. One of the contributing factors to market growth is technological advancements. For instance, VitriCell SA announced the achievement of a USD 1.2 million investment in January 2018. These funds are intended to help the company to launch aseptic vitrification-based goods (new cell cryopreservation technique). In the next years, this is likely to have a beneficial influence on the ART market. However, Changing Government Regulations, may impede market growth over the forecast period of 2021-2027.

Geographically, Europe is the leading region and holding the major share of market due to the increase in utilization of novel technology equipment services, high disposable income and rise in incidence of infertility cases. However, Asia pacific is the fastest growing region factors are rise in awareness about surrogacy and increase in demand for assisted reproductive technology.
