## **Abstracts**

Global Autologous Stem Cell and Non-Stem Cell Based Therapies Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028.

Autologous stem-cell transplantation is a form of transplant in which stem cells or homogenous cells are removed from an individual's body, accumulated, and then returned to the same person. It is also known as autogenous stem-cell transplantation or autogenic or auto-SCT. The two common forms of stem cell transplantation are allogenic stem cell transplantation and autologous stem cell transplantation. The increasing prevalence of cancer and diabetes in all age groups, rising geriatric population, increasing demand for the autologous stem cell and non-stem cell primarily based therapies, execution of several favorable government policies are the primary factors that may accelerate the market demand. For instance, according to the National Cancer Institute, there were nearly 16.9 million cancer survivors in the United States,

which is anticipated to reach 22.2 million by 2030. Additionally, the increasing number of research and development activities and vast untapped markets in developing economies are further propelling market growth around the world. However, the shortage of skilled professionals hinders the market growth over the forecast period of 2022-2028. Also, the introduction of novel autologous stem cell-based therapies in regenerative medicine is anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the global Autologous Stem Cell and Non-Stem Cell-Based Therapies market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the availability of well-developed healthcare infrastructure for the treatment of many infectious disorders and minimizing risks involved with the therapy. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as rising investment for advancing healthcare facilities, as well as the imposition of favorable reimbursement policies, would create lucrative growth prospects for the Autologous Stem Cell and Non-Stem Cell-Based Therapies market across the Asia-Pacific region.
