## Abstracts

Global Automated container terminal Market is valued approximately at USD 9.51 Billion in 2019 and is anticipated to grow with a healthy growth rate of more than 3.70% over the forecast period 2020-2027. An automated container terminal can be defined as a terminal that runs as an automated process some or all of discharging of ships, transport, and yard equipment operations. It efficiently increases the level of customer satisfaction by limiting the overall downtime and maximizing operation efficiency. It reduces the overall operational cost of the ports by reducing overall labor costs. The rapid growth in global container port and increase in growth of shipping containers across the globe is the factor stimulating the growth of market over the forecast years. For instance, as per Statista, the year-on-year change in global container port throughput in 2019 was 2.3% which rose to 3.3% in 2020. Also, in 2016, the global shipping containers market was about USD 4.60 billion and is expected to increase with USD 11.00 billion by 2025. In addition, increasing labor cost in developed countries is the factor propelling the growth of market over the forecast years. However, the requirement of high initial cost for the implementation of automated container terminals is the factor hampering the growth of market.

The regional analysis of global Automated container terminal Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to growing demand for large container ships. Whereas Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period
