Abstracts

Global Automotive Hypervisor Market is valued approximately at USD 129.6 million in 2019 and is anticipated to grow with a healthy growth rate of more than 33.2% over the forecast period 2020-2027. A hypervisor is a type of computer software, hardware, or firmware that operates virtual machines. The system on which the hypervisor runs multiple operating systems and/or virtual machines through an operating system is known as a host. In general, the hypervisor is an embedded technology that has been extensively utilized for the in-vehicle infotainment application across the automotive sector. This technology involves the visual assistance and helps in the virtualization of several hardware devices since they are capable of accessing the customary operating system/host system that helps in achieving access to the commonly connected devices/electronics. As a result, embedded hypervisors are integral for compliance in the automotive industry, thereby augmenting the market growth. Moreover, the integration of several automotive applications to support centralized function, increasing complexities of electrical and electronic architecture in advanced vehicles, and the rise in penetration of electric vehicles are the few factors responsible for the impressive CAGR of the market during the forecast period. According to the survey by the International Energy Agency in 2018, more than 1 million electric cars were sold in 2017 with more than half of global sales in China. Also, it is estimated that the total number of electric cars sold surpassed 2.1 million across the globe in the year 2019. Likewise, in

2019, China remained the world's most sophisticated market for electric vehicle sales in absolute terms, with 2.3 million electric vehicles in active use. This, in turn, is likely to strengthen the demand for automotive hypervisor, thus contributing to the growth of the global market. However, the high maintenance cost of hypervisor and lack of standard protocols to develop software for automotive applications are the few factors impeding the market growth over the forecast period of 2020-2027.

The regional analysis of the global Automotive Hypervisor market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Asia-Pacific is the leading/significant region across the world in terms of market share owing to the rising production and/or sales of automotive vehicles, along with the presence of a large number of market vendors in the region. Whereas Asia-Pacific is also anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027. Factors such as the escalating demand for advanced safety, convenience, and comfort systems, and the existence of well-established automotive sector in the developing nations, such as China and India, are the few factors creating a lucrative opportunity for the growth of the automotive hypervisor market in the Asia-Pacific region.
