Abstracts

Global Automotive Logistics Market is valued at approximately USD XXX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Automotive logistics is the flow of automobiles, components, replacement parts, and raw materials in the automotive purchasing, manufacturing, and selling process. In the automotive industry, logistics include raw material and component inbound transportation management, garage transportation management of the manufacturing process, and vehicle and spare parts transportation management, which includes distribution processing delivery, loading and unloading, object purchasing, transportation, storage, and information processing. The Automotive Logistics Market is expanding because of factors such as strict emission standards and an increase in international free trade agreements that are driving market demand across the world.

Automobile logistics transports commodities or products from one location to another via ships, planes, and commercial vehicles. All types of transportation use fossil fuels to power vehicles, which emit hazardous pollutants and contribute to pollution levels rising. As a result, various environmental and sustainability rules aimed at boosting fuel efficiency and reducing harmful emissions are being introduced around the world. For instance, the International Maritime Organization (IMO) adopted new measures to limit

ship emissions in February 2020. The revised regulation cut the sulphur limit in fuel oil used on board ships operating outside designated emission control areas to 0.05% m/m (mass by mass). Also, the United States Environmental Protection Agency (EPA) confirmed the greenhouse gas emission requirements for commercial airplanes in 2020. Also, the improving Finished Vehicle Logistics (FVL) operational efficiency and digitalization of operations will provide lucrative growth opportunities for the market during the forecast period. However, the shortage of truck drivers may stifle market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Automotive Logistics Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. In terms of revenue, Asia Pacific dominated the market owing to increased vehicle demand, raw material availability, and low salaries are responsible for the region's explosive expansion in automobile manufacture. North America is expected to grow with the highest CAGR during the forecast period owing to factors such as the increased performance of multimodal logistical chains and improved infrastructure, which help to minimize logistical costs, which are driving market expansion in this region.
