Global Automotive Software Market is valued approximately USD 14.5 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 16.9% over the forecast period 2020-2027. Automotive software is a set of directions that helps the user to interact with core in-vehicle hardware and also execute control functions in a vehicle. It mainly emphasized on the rising trend towards automotive haptics, sensor fusion, and the implementation of the on-board vehicle monitoring system. This software is mainly designed to support and enhance the experience of utilizing a motor vehicle. This software can also involve in connecting devices, such as smartphone or on-call safety programs, to minimize the vehicle overlap. Further, the emergence of IoT and smart & connected vehicles, automotive software have observed increased demand significantly around the world, due to the rising need of an interactive solution among the sensors surrounded on the vehicles and users of these vehicles. These factors are anticipated to drive the market growth during the forecast period. Further, rising production & demand

of electric vehicle and passenger car, growing adoption of ADAS (advanced driver-assistance systems) feature in vehicle, and escalating demand for connected vehicles due to the advent of IoT are the few factors responsible for the high CAGR of the market growth during the forecast period. According to the Edison Electric Institute (EEI), the global electric vehicle (EV) sales were estimated at around 312,000 units in Q1 2018, an increase of 58% as compared to Q1 2017 which holds almost 197,000 units. Similarly, as per the Bloomberg New Energy Finance (BNEF) report 2019, the global electric vehicle sale is expected to reach almost 54 million by the year 2040. This, in turn, will promote the demand for automotive software all over the world. The advent of COVID-19 pandemic has a swift and severe impact on every single sector of global industry including automotive industry thus, representing a substantial decline in the production of passenger cars and commercial vehicles. With the reduced production of vehicles, the demand for automotive software significantly decline, which may act as a major roadblock for the market growth in the recent years. However, the lack of standard protocol to develop software platform is one of the major factors impedes the market growth during the forecast period of 2020-2027.

The regional analysis of global Automotive Software market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia-Pacific is the leading/significant region across the world in terms of market share owing to the rising production of passenger & commercial, increasing penetration of connected cars and electric vehicles, and rapidly changing in-vehicle electronics architecture in the region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
