## **Abstracts**

Global Autonomous Crop Management Market is valued at approximately USD 1.45 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 16.2% over the forecast period 2022-2029. Autonomous crop management is a method of collecting agricultural data in order to improve crop growth, production, and development by utilizing advanced technologies and software. The increasing number of governments initiatives about the digitalization of the agricultural industry, rising concerns about climate change and food security, and high integration of artificial intelligence and machine learning are some chief factors that are fostering market growth worldwide.

The escalating global population is resulting in rising demand for food that is directly influencing market growth across the globe. As per the World Bank, the population around the world was recorded at 7.84 billion in 2021 an increase from 7.6 billion in 2018. Also, the United Nations Food and Agriculture Organization (FAO) estimated that 70% of world food production is anticipated to increase by 2050 globally. Accordingly, the rising population is boosting demand for food that impels the need for precision farming, thus, in turn, the autonomous crop management market is anticipated to expand at a substantial rate. Moreover, the increasing introduction of innovative products by the key market players, as well as the rising adoption of smart farming

technologies are presenting various lucrative opportunities over the forecasting years. However, the dearth of technical expertise and high initial capital investment are hindering the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Autonomous Crop Management Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the increasing technological advancements, favorable government support, and rising infrastructure development. Whereas, the Asia Pacific is also expected to grow with the highest CAGR during the forecast period, owing to factors such as the rising number of government initiatives, development of the agriculture industry, and growing awareness among cultivators in the regional market space.
