Abstracts

Global Battery Plate Market is valued at approximately USD 2.08 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 16.63% during the forecast period 2023-2030. Battery plates are critical components within lead-acid batteries, which are widely used for energy storage in various applications, including automotive, industrial, and renewable energy systems. These plates are immersed in an electrolyte solution of sulfuric acid, and together, they facilitate the electrochemical reactions necessary for energy storage and release. The Battery Plate Market is expanding because of factors such as the rising adoption of electric vehicles, increasing demand for energy storage solutions, and growth in the telecommunications and electronics sector.

The surge in electric vehicle demand is driving a global upswing in battery cell production. The appetite for batteries is experiencing a remarkable 30% year-on-year growth and has the potential to soar to 30,000 GWh by 2030, as per NITI Aayog (National Institution for Transforming India). Original Equipment Manufacturers (OEMs) are progressively revealing the cessation dates for their Internal Combustion Engine (ICE) vehicles, signalling a commitment to substantial increases in Electric Vehicle (EV) sales. This shift is poised to impact 50% of global vehicle sales, aligning with OEM objectives to phase out ICEs by 2050. As EV demand skyrockets, the manufacturing of battery components must escalate accordingly, prompting new battery cell manufacturers to plan gigafactories. This presents significant opportunities for battery component manufacturers to secure fresh supply contracts. With a growing emphasis on reducing fuel consumption, this market is experiencing substantial growth, with

projections indicating a robust trajectory in the forecast period. In addition, rising investment in battery cell production to reduce fuel consumption and the rising proliferation of consumer electronics are some factors creating new opportunities for market growth. However, raw material price volatility and stringent environmental regulations related to lead-acid batteries stifle market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Battery Plate Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Asia Pacific dominated the market in 2022. The market in the region is being driven by factors such as automobile manufacturing, lithium-ion battery production, massive consumer demand in China, India, and Japan, rising Urbanization and Infrastructure Development, Increasing awareness of environmental issues and a shift toward cleaner and sustainable energy solutions in the region. Europe is expected to grow at the fastest rate over the forecast period, owing to factors such as increasing emphasis on renewable energy sources and the rising adoption of electric vehicles across the region have stimulated the demand for energy storage solutions, thereby propelling the Battery Plate Market.
