Abstracts

Global Behavioral Health Care Software And Services Market is valued approximately USD 2.9 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 12.70% over the forecast period 2022-2028. Physicians and other professionals who assist in the management of clinical, administrative, and operational workflows benefit from behavioural health software. The programme also keeps track of the patients' cases and outcomes in order to manage and regulate compliance. Behavioral health software is concerned with the scientific study of a patient's ethnography and is linked to mental health, self-emotions, behaviour, and the ability to execute daily tasks. According to the Lancet Commission, the global cost of treating mental illnesses was USD 2.5 trillion in 2020 and is expected to reach USD 6 trillion by 2030. The economic costs are primarily due to the early onset of mental illness and lost productivity, with an estimated 12 billion working days lost each year. Behavioral health software keeps track of this form of worry and stress. Government funding, rising mental health software adoption, favourable behavioural health reforms, government initiatives to encourage EHR adoption in psychiatry hospitals and facilities, and growing preference for mental health services despite provider shortages are all contributing to market growth. For instance, SimplePractice, LLC launched a video conferencing telehealth platform in a behavioural health setting in 2018. The key restraints on the worldwide behavioural health software market are the high cost of installation and maintenance, a shortage of manpower, the digital divide, limited reimbursement for mental healthcare, and issues

with information security and privacy.

The key regions considered for the global Behavioral Health Care Software and Services Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America accounted for largest market revenue. Medicare reimburses telepsychiatry services in the United States, making the reimbursement scenario promising. As the public becomes more aware of mental health software, Medicare policies continue to improve. For example, the Telemental Health Expansion Act (HR 5201) was presented in the United States Congress in November 2019, with the goal of removing regional constraints from the rules for mental health treatments offered via telehealth. Whereas, Asia Pacific is expected to have the highest CAGR. Rising smartphone and internet penetration, as well as a growing geriatric population in China and Japan, are expected to drive regional growth. Asian countries with a large number of smartphone users, such as China and India, provide enormous opportunities for the market to grow.
