Global Behcets Disease Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Behcets Disease or Behcet's syndrome, is a rare disorder that causes blood vessel inflammation throughout the body. This is an autoinflammatory condition is where body's natural defence against infection and illness – mistakenly attacks healthy tissue. The major symptoms of Behcets disease are genital and mouth ulcers, red, painful eyes and blurred vision, acne-like spots, headaches, painful, stiff, and swollen joints among others. The rise in incidences of Behcets disease worldwide and growing technological advancements in healthcare industry are key factor driving the market growth.

The increasing prevalence of Behcets disease is driving the global market growth. For instance – as per National Center for Biotechnology Information (NCBI) – as of December 2022, Turkey has the highest prevalence of Behcets disease affecting 420 people per 100,000 population. Additionally, In the United States, the prevalence is estimated at 5.2 people per 100,000 population. Moreover, Behcets UK's estimates – in the United Kingdom the prevalence of Behcets disease is estimated at 0.64 people per 100,000 population. Also, increasing R&D expenditure in healthcare sector and growing prevalence of autoinflammatory conditions would create lucrative growth prospectus for the market over the forecast period. Disease stifles market growth throughout the forecast period of 2022-2029.
