Global Bio-polyamide Market is valued approximately USD 191.66 million in 2022 and is anticipated to grow with a healthy growth rate of more than 19.6% over the forecast period 2023-2030. The bio-polyamide refers to the chemical industry that focuses on the production and distribution of polyamide materials derived from renewable or bio-based sources. Bio-polyamides are polymers made from renewable feedstocks such as vegetable oils, plant-based sugars, or bio-waste materials. These sustainable alternatives to traditional petroleum-based polyamides offer similar performance properties, including high strength, durability, and heat resistance. The bio-polyamide market is driven by the growing demand for environmentally friendly materials in various end use industries and increasing regulations such as global warming initiatives and plastic bag bans.

These bio-based materials offer similar performance characteristics to conventional polyamides, including excellent mechanical properties, high heat resistance, and good chemical resistance. Bio-polyamides find applications in various industries, including automotive, electronics, textiles, packaging, and consumer goods. According to United Nations, Paris Agreement countries take the initiative to become carbon neutral by 2050. Along with these, there is also an increase in demand for bio-polyamide from end-use industries such as electronics and automobiles. According to Statista smart phones sold in 2020 was 1351.84 million and the number is rising in 2021 by 1433.86 million

According to the International Organization of Motor Vehicle Manufacturers, total vehicle production in 2021 was 80,250,102 units and in 2022 was 8,50,16,728. Thus increasing smartphone sales and automobile manufacturing also fuel the demand for the polyamide market. In addition to increasing awareness about environmental sustainability and increasing the cost of fossil fuel base resources. However, the high cost of bio-polyamide hinders the market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Bio-polyamide Market study include Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Europe dominated the market in 2022 owing to the increasing awareness of eco-friendly material and the presence of a well-developed automobile industry in the region. The automotive sector's focus on sustainability and lightweighting has led to increased demand for bio-polyamides in Europe. Europe is also considered the fastest-growing market for bio-polyamide during the forecasted period due to governments and research institutions have actively supported the development and commercialization of bio-based materials.

Recent Developments in the Market:

In April 2023, DOMO Chemicals expanded its manufacturing capabilities with a new production line in Mahape, Navi Mumbai. This strategic move is a response to the significant growth experienced by DOMO Chemicals in its Asian operations, particularly in the electrical & electronics, consumer, and automotive, industrial products sectors. The company's polyamide-based solutions have been in high demand in these industries, prompting DOMO Chemicals to increase its capacity across Asia. In June 2021, Solvay announced to introduce Bio Amnit, the first textile yarn made of

polyamide that is partially derived from biomaterials. An entirely Brazilian textile facility owned by Solvay produced the finished polyamide 5.6. The introduction of Bio Amni would enable the company to satisfy the rising demand for sustainable textiles, particularly those made of bio-based ingredients.
