Abstracts

Global Biopsy Devices Market is valued approximately USD 2.12 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 6.8% over the forecast period 2021-2027.

Biopsy is a surgical process of removing tissue from an organ to determine the presence or extent of a disease in the body. These diseases are generally cancerous or inflammatory, that is they spread at a very fast rate if not removed in time.

Improvements in the health care infrastructure and increase in the number of cancer patients worldwide are the factors contributing to the market growth. For instance, according to the report published by World Health Organization (WHO), cancer is becoming the leading cause of deaths worldwide. The global cancer occurrence was 14.1 million in the year 2012 and will rise at a whopping rate of 70% in the coming two decades. However, high prices of the devices impede the growth of the market over the forecast period of 2021-2027. Also, advancements in the technology and increasing awareness about diagnosis of such diseases is likely to increase the growth of the market in the forecasting period.

The regional analysis of global Biopsy Devices market when considering for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World has led to the analysis that North America is a significant region across the world in terms of market share owing to establishment of prominent players in the region and high penetration rate of advanced technologies in the market. Whereas Asia Pacific is anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as improvements in the healthcare infrastructure coupled with increase in

the cancer rates in the region would create lucrative growth prospects for the Biopsy Devices market across Asia-Pacific region.
