Global Bioresorbable Vascular Scaffold Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. The Bioresorbable Vascular Scaffold (BVS) is a non-metallic mesh tube that is generally used in the treatment of a narrowed artery. The BVC completely gets absorbed by the body leaving no foreign material. Factors such as the growing geriatric population and increasing incidences of target diseases such as rheumatic heart disease, coronary heart disease, peripheral arterial disease, cerebrovascular disease, congenital heart disease, and pulmonary embolism are driving the global market growth.

According to the World Health Organization (WHO), it was estimated that approximately 17.9 million people worldwide die every year because of cardiovascular diseases. Therefore, the high prevalence of CVDs is propelling the demand for Bioresorbable Vascular Scaffold, which, in turn, augments the market growth across the globe. In addition, rising technological advancements and a robust product pipeline are presenting lucrative opportunities for growth in the market during the forecast period. However, lack of awareness about bioresorbable vascular scaffolds and high costs related to the R&D activities are hindering market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Bioresorbable Vascular Scaffold Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Europe dominated the market in terms of revenue, owing to the presence of

skilled professionals and growing investment in R&D activities. Whereas the Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising expenditure on healthcare, as well as growing incidences of target diseases.
