Abstracts

Global Blackout Fabric Market is valued at approximately USD 8.58 Billion in 2021 and is anticipated to grow with a healthy growth rate of more than 6.6% over the forecast period 2022-2028. Blackout fabrics are most frequently used as drapery or curtains in hotel rooms because they effectively block most of the light that would otherwise enter through a window when the curtains are drawn. The market is being driven by an increase in spending on home improvement and interior decoration, as well as an increase in home purchases. Furthermore, the growing trend of smart homes will contribute to market growth during the forecast period. A new era of smart items, including blackout fabric, smart mattresses, and fire stick TV, has arrived as a result of the adoption of smart homes in urban areas. Additionally, a person's quality of life is negatively impacted by increased chronic sleep deprivation. Many clinical analyses demonstrate that a wide range of conditions, including jet lag, breathing problems, disturbances brought on by inadvertent light or sound, an unhealthy diet, and a variety of other significant factors, can impair sleep. Using the right drapes as a window addition made of thicker fabric intended for such conditions can allow light and sound to be absorbed. The key players in the blackout fabric laminate market are focusing on mergers and collaborations, which are driving blackout fabric laminate sales. The announcement of DUNMORE Corporation's blackout fabric with solar control and light filtering has increased demand for blackout fabric laminates. Similarly, UNITEC Textile Decoration Co. Ltd introduced a new line of fabric blackout blinds that are environmentally friendly, perform well, save money, and have more functions. This will boost sales of blackout fabric laminates in newer markets. However, the COVID-19

pandemic has hampered market growth.

The key regions considered for the global Blackout Fabric market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America held the largest market share. This is because there are more interior projects, whether they are commercial, residential, or industrial, in many areas of Canada, the United States, and Mexico. Blackout cloth is highly sought-after to keep the interior warm and cost because the bulk of Canada is blanketed in snow and the temperature is below zero. Asia Pacific is expected to grow at the highest CAGR. The Asia Pacific market's expansion can be attributed to rising temperatures in coastal and desert areas. Tourists from cold countries usually prefer to stay in hotels that provide a pleasant atmosphere because it becomes difficult for them to survive and have a memorable journey if the weather continues to affect their stay, which will act as a restraint on the tourism industry. The blackout fabric aids in gauging the hot and humid summer climate, particularly in commercial and household spaces.
