## **Abstracts**

Global Bleeding Disorders Treatment Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Bleeding Disorders are a group of disorders that affect body's ability to form proper blood clot. Its symptoms include excessive bleeding after injury, surgery, menstruation among others. Moreover, this improper clotting is mainly caused by defects in blood components such as platelets and/or clotting proteins. Bleeding disorders are generally caused by low red blood cell count, a vitamin K deficiency and side effects from certain medications. The increasing prevalence of Hemophilia and growing government initiatives for disease awareness are key factors driving the market growth.

Hemophilia is an inherited bleeding disorder in which the blood does not clot properly. Its prevalence has progressively increased during the last few decades. According to the Centers for Disease Prevention and Control (CDC) estimates – the estimated prevalence of hemophilia in the United States is 12 cases per 100,000 U.S. males for hemophilia A and 3.7 cases per 100,000 U.S. males for hemophilia B. Additionally, around 30,000 and 33,000 males are living with hemophilia in the country. Moreover, as per The Hemophilia Society – in UK, one in 2,000 men, women and children have a diagnosed bleeding disorder. Additionally, most common is von Willebrand disorder

(VWD), which affects around 7,071 women and 4,081 men in the country. Also, rising healthcare investment in developing regions and growing digital transformation in health care sector would create lucrative growth prospectus for the market over the forecast period. However, the high cost of Bleeding Disorders Treatment and dearth of skilled professionals stifle market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Bleeding Disorders Treatment Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the presence of leading market players and rising healthcare spending in the region. Whereas Asia Pacific is expected to grow with a highest CAGR during the forecast period, owing to factors such as rising geriatric and target populations, and growing awareness towards bleeding disorders in the region.
