Abstracts

Global Blockchain Finance Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Blockchain Finance is defined as the application of blockchain technology in the financial services industry. Blockchain technology has different applications in the financial services sector such as order-to-cash, trade finance, intercompany transactions, and reconciliation among others. The application of blockchain in the financial services sector offers various benefits including security, transparency, and the traceability of data shared that collectively contributes to cost saving as well as increased efficiency. The increasing penetration of digital transactions worldwide and growing adoption of distributed ledger technology (DLT) systems as well as strategic initiatives from leading market players are key factors accelerating the market growth.

The increasing penetration of digital transaction worldwide contributes to the growth of the Global Blockchain Finance Market. For instance, according to Statista – as of 2022, globally the transaction value in the Digital Payments segment is estimated at USD 8.49 trillion, and the total transaction value is projected to show an annual growth rate of 12.31% between 2022 & 2027 to reach to USD 15.17 trillion by 2027. Also, rising incidences of data breaches and growing automation in the financial services sector

worldwide would create lucrative growth prospects for the market over the forecast period. However, the lack of penetration in developing regions coupled with high initial investment requirements impede the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Blockchain Finance Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading region owing to the presence of leading market players and the growing financial services sector in the region. Whereas the Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising expansion of the banking & Finance sector as well as increasing prevalence of data breach incidences in the region.
