Abstracts

Global Blood Gas and Electrolyte Analyzers Market is valued approximately USD XXX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027. Blood gas, pH, minerals, and even certain molecules are measured in whole blood collections using detectors. Capacitors are often used in blood gas/pH analyzers to quantify acidity, co2 pressure gradient, and partial vapor pressure in the bloodstream. Increasing number of patients in the operation theatres, ICU's (Intensive Care Units), emergency departments and many more and increase in the number of aged people worldwide are factors contributing to the market growth. For instance, according to United Nations' Department of Economic and Social Affairs, the number of elderly population aged 65yrs or above is expected to boost to 1.5 billion, by the year 2050 from 703 million, in the year 2019. However, huge involvement of costs in the healthcare expenditure and constant government interventions in the healthcare and medical sector impedes the growth of the market over the forecast period of 2021-2027. Also, increasing technological breakthroughs and innovations and increasing demand for integrated systems and offloads in the market is likely to increase the growth of the market in the forecasting period.

The regional analysis of global Blood Gas and Electrolyte Analyzers market includes Asia Pacific, North America, Europe, Latin America and Rest of the World for analysis and estimation, North America is a significant region in terms of market share across

the world owing to increasing number of trained professionals in the medical sector. Whereas, Asia Pacific is anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as increasing spending towards healthcare expenditure would create lucrative growth prospects for the Blood Gas and Electrolyte Analyzers market across Asia Pacific region.
