## **Abstracts**

Global Blow Molding Machinery Market is valued approximately at USD 4,839.54 million in 2019 and is anticipated to grow with a healthy growth rate of more than 3.71% over the forecast period 2020-2026. Low molding machines conduct manufacturing processes in which hollow plastic components are joined to form bottles and other commodities. The procedure involves melting plastic, and then allowing compressed air to move through the tube-like object with a hole at one end. Pressing the molten plastic to match the mold allows use of the air pressure. The market growth is primarily driven by growth in plastic industry. Additionally, surging demand from food and beverages packaging along with the increasing adoption of rigid plastics in packaging materials are other major factors which are fueling the growth of the market. However, environmental concerns associated with the blow molding machinery are expected to hamper the market growth. Low labor costs, bulk production and high demand for molded plastic products are driving growth in the industry. Compared to other forming methods, blow molding is the most versatile technique. This is also commonly used in industries like the automotive, medical, packaging, food & beverage, and others. Increasing demand for blow molding machines in the food & beverage industry to manufacture various packaging and processing components, including food & beverage containers, processing equipment components, conveyor system components, and others, is one of the major factors driving market growth.

The regional analysis of Blow Molding Machinery market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the

World. Over the coming years, the Asia Pacific region is projected to see significant growth in the blow molding machinery market owing to increasing trend of westernization, increasing disposable incomes and changing consumer food habits have fuelled demand for bottled beverages, particularly in developing countries like India and China. Additionally, hectic lifestyles have led customers around the country to choose soda and carbonated beverages. This, in effect, is likely to drive regional demand for packaging items.
