Abstracts

Global Blowing Agents Market is valued approximately USD 1.0 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 9.5 % over the forecast period 2020-2027. Blowing agents are commonly used additives in polymeric foam industry. While, manufacturing process of blowing agents are used to impart particular properties to the polymeric foam. The blowing agents are environment friendly and helps to reduce the production cost in polymeric foam business. The global blowing agents market is facing various challenges due to COVID-19 because of reduced workforce availability, government regulations to close production facility, reduced operating capacity of production facility, disruption in foam supply chain from raw material sourcing to end products and closing of international borders for shipment. However, increasing demand for blowing agent from developing countries in different applications and high growth in global polymeric foams market are the few factors responsible for growth of the market over the forecast period. Furthermore, the introduction of new product and solutions along with other strategic alliance by the market players will create a lucrative growth of the market. For Instance: on 02nd March 2020, Haltermann Carless established a hydrogenation plant in Speyer, Germany, with the installation of a 70- metric ton tank container. This new plant will have processed pentanes, which are used as blowing agents in insulation materials, gas oil, which is very similar to diesel fuel and naphtha, which is roughly equivalent to crude gasoline. However, the frequent changes in choice of blowing agents according to environmental

regulations and high cost of shifting technology are the major factors restraining the growth of global Blowing Agents market during the forecast period.

The regional analysis of global Blowing Agents market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific is the leading/significant region across the world in terms of market share owing to the major production base of HCFC blowing agent situated in China and the increasing usage of hydrocarbons, unsaturated HFCs and other chemical blowing agents. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
