Abstracts

Global Body Fat Reduction Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Body fat reduction, in the context of health, medicine, or physical health and fitness, refers to a loss of the total body mass, by body weight, by mass, by a mean loss of fat (adipose tissue), or lean body mass that is muscle, bone mineral deposits, tendon, and other related tissues. Rising cases of obesity enhances the market growth. For Instance: according to world obesity organization, it is projected that 2.7 billion adults will be affected by obesity about 1 billion will be overweight. And about 77 million of the adults will be under obesity by 2025. Increasing focus on cosmetic surgeries and aesthetics will enhance the market growth. However, high cost of procedures coupled with post treatment complications impedes the growth of the market over the forecast period of 2021-2027. Also, rising number of facilities regarding fat loss services and new developments is likely to increase the market growth during the forecast period.

The regional analysis of global Fat Reduction Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to increasing presence of key players, frequency of obesity cases, increase in healthcare investment, innovation in technology, and increase in government programs. Whereas Asia-Pacific is also anticipated to exhibit highest growth rate over the forecast period 2021-2027. Factors such as rise in population growth, increase in facilities offering weight loss services and increased expenditure in the healthcare would create lucrative
