Abstracts

Global Bone Allografts Market is valued at approximately USD 1.6 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 8.8% over the forecast period 2022-2029. Bone Allografts is a hormone produced by the pancreas that regulates the amount of glucose in the bloodstream at any given time. Some of the key drivers impacting the industry include an aging population and the growing adoption of allografts due to their properties, such as immediate structural support and osteoconductive. The growing geriatric population, rising healthcare costs, and rising healthcare providers' adherence to allograft are some of the factors propelling the industry's growth.

The World Health Organization (WHO) population division estimates that there were 900 million people over the age of 60 in 2015 and that by 2050, there will be 2 billion of them. As a result, the market growth will be supported by the growing senior population and the rising prevalence of orthopedic issues. Allografts are steadily replacing autografts as a result of developments in medical and bioengineering technology. In the coming years, this tendency is anticipated to drive the worldwide bone allografts market. Additionally, the frequency of bone fractures is rising, and complex bone graft

techniques are developing. However, the high cost of Bone Allografts stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Bone Allografts Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Due to increased awareness of commercially available new products, accessibility to a highly established healthcare system, and larger healthcare expenditures, North America dominated the market in terms of revenue. These factors are the main drivers of regional expansion. Due to reasons including an ageing population and an increase in target markets, Europe is predicted to have significant growth during the projection period, The development of healthcare facilities and available resources was significantly responsible for the increase in life expectancy and quality of life. The subpopulation that is susceptible to a number of diseases and disorders, including degenerative spine diseases, includes a sizeable section of the elderly population.

Recent Developments in the Market:

In February 2022, The Osteo-P Synthetic Bone Graft Substitute (BGS) for the musculoskeletal system is launched, Molecular Matrix, Inc. (MMI). MMI's hyper-crosslinked carbohydrate polymer (HCCP) technology platform, which has been designed to enhance the microenvironment for bone repair and regeneration, is used to create Osteo-P BGS..

In Aug 2020, Tempest Allograft Bone Matrix was introduced by Spine Wave, marking the company's entry into the spine biologics market. The company can effectively compete in the demineralized bone allograft section of that market thanks to Tempest Allograft Bone Matrix, which also complements its wide range of cutting-edge spine implant solutions.
