Abstracts

Global Bone Cancer Treatment Market is valued at approximately USD 1.2 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 4.5% over the forecast period 2022-2029. Bone Cancer is a rare disease that affects bones. It begins with bones and can spread to other parts of the body and damages normal bone tissues. Osteosarcoma is considered the most common type of bone cancer that develops in the cells where new bone tissue forms. There are different treatment methods for bone cancer which include surgery, radiation therapy and chemotherapy. The increasing prevalence of bone cancer and growing penetration of cancer care services in developing regions as well as strategic initiatives from leading market players are key factors accelerating the market growth.

The increasing incidences of bone cancers are contributing to the growth of the Global Bone Cancer Treatment Market. For instance, according to American Cancer Society's estimates- in 2022, around 3910 new cases of bone cancer were reported in the United States, whereas approximately 2100 children & adults lost their lives due to bone cancer. Moreover, the most prevalent types of cancer in children and teens are Osteosarcoma with 56% prevalence, followed by Ewing tumors (34%), and Chondrosarcoma (6%). Also, growing government initiatives & reimbursement policies and rising healthcare infrastructure in developing regions would create a lucrative

growth prospectus for the market over the forecast period. However, high treatment cost stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Bone Cancer Treatment Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the dominance of leading market players and increasing technological advancements in bone cancer treatment in the region. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising geriatric and target populations, increasing government spending on healthcare infrastructure and rising emergence of cancer care centers in the region.
