Abstracts

Global Bone Growth Stimulator Market is valued approximately at USD 1.14 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 5.5% over the forecast period 2019-2026. Bone growth stimulator is a type of device which stimulates the natural healing of bone by transferring low-level pulses of electromagnetic energy to injury or fusion site. For the healing purpose, these devices use several techniques such as stimulations or ultrasounds. Bone growth stimulator is helpful after a multi-level fusion process or for patients who have specific comorbidities, such as diabetes or smoking habit. It also helps in the production of new cell and works on all fractures. It is increasingly used for the healing of long bones such as tibia and in procedures such as spinal fusions, that are complex to heal. Rising patient preference for non-invasive and minimally invasive surgical treatments, surging incidences of osteoarthritis & hip fractures, along with growing technological advancements are the few factors responsible for high CAGR of the market over the forecast period. For instance, Credible reports has revealed that around 1.6 million hip fractures occur around the world in each year and is expected to rise to between 4.5 million and 6.3 million by 2050. Moreover, growing obese and diabetic population along with the procedural advantages offered by bone stimulation devices in treatment of bone fracture is another

factor which influencing the growth of market in the upcoming years. However, limited availability of medical reimbursement for bone stimulation products along with side effects associated with orthopedic treatment are the few factor anticipated to restraining the growth of global Bone Growth Stimulator market during the forecast period.

The regional analysis of global Bone Growth Stimulator Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the improved reimbursement policies, improving healthcare infrastructure, and increasing incidences of obesity and fractures in the region. However, Asia-Pacific is anticipated to exhibit highest growth rate / CAGR over the forecast period 2019-2026. Factors such as increasing aging population and rising incidences of bone fractures & spinal fusion surgical procedures would fuel-up the adoption of bone growth stimulator in the Asia-Pacific region.
