Abstracts

Global Brain PET-MRI Systems Market is valued approximately at USD 326.3 Million in 2022 and is anticipated to grow with a growth rate of more than 5.1% over the forecast period 2023-2030. Brain PET-MRI systems are advanced medical imaging devices that combine the functional and molecular imaging capabilities of positron emission tomography (PET) with the detailed anatomical imaging provided by magnetic resonance imaging (MRI). These systems are specifically designed for capturing high-resolution images of the brain, offering comprehensive insights into its structure, function, and metabolic activity. The application of Brain PET-MRI systems is diverse and spans various fields, including neurology, psychiatry, and neuro-oncology. The utilization of Brain PET-MRI systems offers a holistic approach to brain imaging by combining functional, anatomical, and molecular information in a single scan. The driving factors that are boosting the market growth is advancement in imaging technology, rising prevalence of Neurological Disorders, growing importance of Precision Medicine.

According to the World Health Organization (WHO), up to one billion people globally are affected by a wide range of neurological disorders, including epilepsy, Alzheimer's disease, stroke, headaches, brain injuries, neuroinfections, multiple sclerosis, and Parkinson's disease. This increase in neurological disorders poses significant challenges and impacts individuals, families, and healthcare systems globally. The global precision medicine market is also contributing to the market growth. According to Statista, the global market for neurological disorders is projected to reach over 140

billion dollars by 2026. Moreover, integration of AI (Artificial Intelligence) and ML (Machine Learning) technologies is expected to create lucrative opportunities for the market growth. However, the high cost of PET-MRI Systems and limited availability to major healthcare institutions or research centers stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Brain PET-MRI Systems Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 with largest market share due to the growing prevalence of neurological disorders in the region, the American Neurological Association has reported that the most commonly observed neurological disorders in the United States include Alzheimer's disease, stroke, traumatic brain injury, epilepsy, multiple sclerosis, and Parkinson's disease. However, Asia Pacific is expected to be the fastest growing region during the forecast period, owing to a rise in the utilization of advanced diagnostic machines within research centers and universities, fueling the market growth. The increasing demand for diagnostic systems in countries such as India, Japan, and China is expected to be a key driver for the regional market in the coming years.
