Abstracts

Global Breast Imaging Market is valued at approximately USD 3.89 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 8.1% over the forecast period 2022-2029. Breast imaging refers to the use of medical imaging techniques to visualize the internal structure of the breast tissue. It is used to screen for and diagnose breast cancer and other breast abnormalities, as well as to monitor the response of breast cancer to treatment. The Breast Imaging market is expanding because of factors such as growing prevalence of breast cancer and rising technological advancements in the field of breast imaging.

Breast Cancer is one of the world's fastest-growing chronic diseases. Its prevalence has progressively increased during the last few decades. According to the World Health Organization, in 2020, there were 2.3 million women diagnosed with breast cancer and 685 000 deaths globally. As of the end of 2020, there were 7.8 million women alive who were diagnosed with breast cancer in the past 5 years. According to the U.S. Department of Health and Human Services, in 2022, it is estimated that there will be 287,850 new cases of female breast cancer and an estimated 43,250 people will die of this disease. Another important component driving space increase is technological advancements in the field of breast imaging. In March 2021, Siemens Healthineers has introduced a new software solution that speeds up the entire reading workflow for breast imaging Mammovista B.smart. Additionally, the Teamplay Mammo Dashboard, a tool for dashboard-based visualization of key performance indicators is introduced in the breast imaging process that serves to optimize workflow. In addition, Smart Breast

Corporation announced acquired certain Molecular Breast Imaging (MBI) assets from Dilon Technologies, Inc. including the Dilon 6800® MBI scanner, the GammaLoc® MBI-guided biopsy, collimator, 3D Tomographic software. However, the high cost of Imaging Systems stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Breast Imaging Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the rising number of breast cancer cases in this region. According to the American Cancer Society's, in 2023 about 297,790 new cases of invasive breast cancer will be diagnosed in women and around 43,700 women will die from breast cancer. Asia Pacific is expected to grow with a highest CAGR during the forecast period, owing to factors such as high R&D investments in breast cancer therapies, and developments in breast imaging modalities in the market space.
