## **Abstracts**

Global Breast Implant Market is valued at approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.3% over the forecast period 2021-2027. One of the primary factors driving the breast implant market is the increased prevalence of breast cancer around the world. Breast cancer has surpassed lung cancer as the most commonly diagnosed cancer worldwide, according to the GLOBOCAN 2020 study. According to the World Health Organization, around 2.3 million women will be diagnosed with breast cancer in 2020,. Breast cancer was found to be so common in Asian women that it accounted for 22.9 percent of all cancer cases in women in 2020. Another factor that will help the market's growth is the growing preference and awareness of women all over the world for breast augmentation and reconstruction treatments for cosmetic enhancement. According to the International Society for Cosmetic Plastic Surgeons (ISAPS) figures from 2019, there were around 1,795,551 breast augmentation procedures performed worldwide in 2019, which was more than any other aesthetic surgery. Furthermore, market players in the area are constantly striving for better and more efficient solutions, as well as extending the life of existing products in the area through new product launches, collaborations, and mergers and acquisitions, all of which will contribute to the breast implant market's growth. Evonik and BellaSeno GmbH, for example, established a partnership agreement in November 2019 to develop new breast implant technology employing RESOMER bioresorbable polymer. Similarly, in May 2021, GC Aesthetics, Inc., a

silicone breast implant maker, has announced the debut of PERLE, a next-generation breast implant that is smooth and has BioQ's patented surface technology. However, the post-surgery side effects and risk involved with the breast implant, as well as high expenses associated with the implant, are the major restraints on the breast implant market's growth over the forecast period of 2021-2027.

The regional analysis of the Global Breast Implant Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World (ROW). North America is the leading region across the world in terms of market share due to increasing number of breast augmentation procedures and rising awareness of cosmetic surgeries in the region. Whereas North America is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to growing self-awareness among women across the region.
