Abstracts

Global Breath Analyzers Market is valued at approximately XX in 2021 and is anticipated to grow with a healthy growth rate of more than xx% over the forecast period 2022-2028. Breath analysing equipment are frequently utilised by law enforcement agencies for breath alcohol detection in order to improve road traffic safety. Growing workplace awareness and regulatory needs to keep the workplace drug- and alcohol-free have resulted in increased product demand from offices, workplaces, and schools. Strict enforcement of road safety rules worldwide, product innovations, activities by key players, and demand for efficient and precise medical detection equipment are driving market expansion. The first COVID-19 breathalyser test created by InspectIR Systems, LLC was authorised by the US FDA in April 2022. The test detects five volatile organic chemicals (VOCs) related to COVID-19 and offers results in three minutes. The COVID-19 epidemic had a significant impact on the market. The epidemic also raised demand for non-invasive testing options that could be carried out while keeping to social distancing standards. As a result, breathalysers have developed as realistic options for diagnosing COVID-19 and other medical disorders without the risk of transmission. Imec and diagnostics created a standard chip-based Breathalyzer Test for COVID-19 in November 2021. As a result, the company was able to create and sell a COVID-19 test based on breath testing, as opposed to standard COVID-19 testing based on saliva, blood, or a sample from the nose/throat cavity. However, disagreements about the accuracy of various types of analyzers, as well as significant vulnerability to external

factors such as temperature, subject BMI, and some prescription medicines, can stymie market expansion.

The key regions considered for the global Breath Analyzers market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue. This supremacy can be due to a highly developed economy, strong product adoption rates, and increased awareness of road traffic safety. Because of the increasing application of these gadgets, the area is likely to maintain its dominance during the projection period. The market is predicted to grow rapidly due to an increase in short and simple product approval procedures. During the predicted period, Asia Pacific is expected to grow the fastest. India, China, Japan, Australia, and Malaysia are among the region's major markets. Breath analyzers are still only used in law enforcement offices and hospital operating rooms in these nations. Untapped markets for breathalysers used privately and in restaurants/bars provide a big opportunity.
