Abstracts

Global Breath Samplers Market is valued at approximately USD 550 million in 2021 and is anticipated to grow with a healthy growth rate of more than 19 % over the forecast period 2022-2028. Breath Samplers are used in Breath analysis. Breath analysis is a medical approach for determining an individual's clinical state by measuring the components present in the exhaled breath. It's a non-invasive technology that allows you to take breath samples as often as you want. The examination of volatile organic molecules in the breath, such as in blood alcohol tests, is known as breath gas analysis. Breath aerosol analysis, on the other hand, involves sampling and analyzing particles released in the respiratory system and present in exhaled breath. Rising impositions of drink and drive laws and regulations, rising prevalence of lung and colon cancer, and rising lethal chronic respiratory diseases have driven the adoption of Breath Samplers across the projected period. For Instance: Chronic Obstructive Pulmonary Disease (COPD) is the third biggest cause of death worldwide, accounting for 3.23 million deaths in 2019. Also, rapid funding in research and production facilities and rising demand from end-users is most likely to boost the overall growth of the Breath Samplers market. However, norms concerning privacy of a person while alcohol testing and high cost of the Breath Samplers can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the global Breath Samplers market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world. Presence of large number of research & development centers is driving the market growth in North America. Whereas, Asia

Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. The market is expected to grow during the projected period, due to production of cost effective yet advanced Breathe Samplers.
