## Abstracts

Global Bulk Terminals Market reached USD XXX Billion in 2020. The Global Bulk Terminals Market tends to grow by a CAGR of XXX% in the 2021-2027 period. Bulk terminals are used for transporting products in bulk from one place to another via shipping. In bulk terminals, dry terminals are accounted for the largest market share in the past couple of years due to the high demand from various regions. Major dry bulk includes iron ore, coal, and minor dry bulk include cement, fertilizers, sugar, and others. In major dry bulks, iron ore holds the major market share following by coal. In the forecasted period, it is estimated that dry bulk can lose their market share to liquid bulk because of increasing demand for petroleum products. Growing demand for minor dry bulks is the major factor driving this market along with the surge in demand from natural gases and other liquid products. Ports are turning into a public-private partnership model which is an opportunity for this market to grow on a wider level in the future. High operational costs due to an increase in warehouse space and requirement of new machines can hinder this market growth. Major players in this segment are majorly focusing on the contract and agreement with the end-user to stable their market position. The dry bulk segment holds are largest market share and it continues to grow but it is estimated that in the forecasted year it will decline as per compare to the liquid bulk segment.

The key regions covered in the global fertigation control system market are North America, Latin America, Europe, East Asia, South Asia-Pacific, and the Middle East & Africa. In terms of value, Asia Pacific accounted for the largest market share, because of exporting bulk products and multiple end-users being available. Europe is the second-largest market in terms of value, due to their newer and upgraded technologies.
