Global Calcium Carbonate Market is valued at approximately USD 39.2 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.6 % over the forecast period 2021-2027. Calcium Carbonate has various advantages for both manufacturers and end-users. The method enables manufacturers to create parts that are faster and stronger than any other alloy material. The casting process produces corrosion-resistant, multifunctional products that can be utilized for a variety of purposes. It also enables manufacturers to create a wide range of products using these aluminum components. The expanding use of aluminum in the transportation, industrial, and building & construction sectors is the key driver for global growth in the Calcium Carbonate industry. For instance, According to the European Automobile Manufacturers' Association (ACEA), 77.9 million automobiles will be manufactured worldwide in 2020. APAC countries such as China, India, and Japan, which show significant growth in automotive production, were mostly expected for the increase in production. The automotive sector has a constant demand for it since it improves fuel efficiency and minimizes environmental degrading events such as carbon dioxide emissions. During the projection period, these are the major drivers driving demand for Calcium Carbonate. Furthermore, the availability of alternative materials hinders the market in forecasting years. Whereas, continuous launches offer opportunities for the market for growth in forecasting years.

The main regions of Asia Pacific, North America, Europe, Latin America, and the Rest of the World are included in the geographical analysis of the worldwide Calcium Carbonate market.
